# FIFA WORLD CUP ANALYSIS DASHBOARD

## Overview

The FIFA World Cup Analysis Dashboard provides a detailed analysis of World Cup history, host nation performance, France's 2018 title-winning campaign, the top four teams at the Qatar 2022 World Cup, and Nigeria's historical performance at the tournament.

The dashboard combines historical tournament data, match-level data, FIFA rankings, host-country information, and calculated DAX measures to identify important patterns in World Cup performance. The analysis focuses on tournament growth, host advantage, championship performance, team rankings, knockout progression, and Nigeria's World Cup journey.

The dashboard is divided into five main analytical pages:

1. Tournament Overview
2. Host Nation Analysis
3. France's Path to Glory 2018

4. Qatar 2022 Top Four Analysis
5. Nigeria at the World Cup

# KPIs

## 1. Total World Cups

Displays the total number of FIFA World Cup tournaments included in the dataset.

**Value: 22**

## 2. Total Matches Played

Shows the total number of World Cup matches recorded across the tournaments.

**Value: 964**

## 3. Total Goals Scored

Displays the total number of goals scored across all World Cup tournaments.

**Value: Approximately 2.72K goals**

## 4. Total Participating Countries

Shows the number of unique countries that have participated in the World Cup.

**Value: 81 countries**

## 5. Total Host Nations

Shows the number of countries that have hosted at least one World Cup.

**Value: 17 host nations**

## 6. Average Goals per Tournament

Measures the average number of goals scored in each World Cup tournament.

**Value: 123.64 goals**

## 7. Host Nation Wins

Shows the number of World Cups won by the host country.

**Value: 6**

## 8. Host Win Rate

Measures the percentage of World Cups in which the host nation became champion.

**Value: 27.27%**

## 9. France 2018 Goals Scored

Shows the total number of goals scored by France during its 2018 World Cup campaign.

**Value: 14 goals**

## 10. France 2018 Goals Conceded

Shows the number of goals France conceded during the tournament.

**Value: 6 goals**

## 11. France 2018 Wins

Shows the total number of matches won by France during the 2018 World Cup.

**Value: 6 wins**

## 12. France 2018 Goal Difference

Measures the difference between France's goals scored and goals conceded.

**Value: +8**

## 13. Previous Champions in the Qatar 2022 Top Four

Shows how many of the 2022 semi-finalists had previously won the World Cup.

**Value: 2**

## 14. Average FIFA Ranking of the Qatar 2022 Top Four

Displays the average pre-tournament FIFA ranking of Argentina, France, Croatia, and Morocco.

**Value: 10.25**

### 15. Best Pre-Tournament FIFA Ranking

Shows the strongest FIFA ranking among the 2022 top four teams.

**Value: 3**

### 16. Lowest-Ranked Top Four Team

Shows the lowest pre-tournament ranking among the four teams that reached the final stages.

**Value: 22**

### 17. Nigeria World Cup Appearances

Shows the total number of World Cups in which Nigeria has participated.

**Value: 6**

### 18. Nigeria Total World Cup Matches

Displays the total number of World Cup matches played by Nigeria.

**Value: 21**

### 19. Nigeria Best Finish

Shows Nigeria's best-ever World Cup stage.

**Value: Round of 16**

### 20. Nigeria Knockout Qualifications

Shows the number of World Cups in which Nigeria progressed beyond the group stage.

**Value: 3**

# Chart Analysis

## PAGE 1: TOURNAMENT OVERVIEW

### 1. Countries with the Most World Cup Titles

Compares the number of World Cup titles won by different countries.

**Key Insight:** Brazil has won the most FIFA World Cups with 5 titles, making it the most successful country in World Cup history.

**Business Meaning:** World Cup success has historically been concentrated among a relatively small group of football nations. Brazil's consistent success demonstrates the importance of long-term football development, talent production, and tournament experience.

## 2. Goals Scored Over Time

Shows how the total number of goals scored per tournament has changed throughout World Cup history.

**Key Insight:** The number of goals scored generally increased over time, especially as the tournament expanded and more matches were introduced.

**Business Meaning:** Tournament expansion has increased both the number of participating teams and the number of opportunities to score goals. Changes in playing styles, tournament formats, and attacking strategies have also influenced scoring patterns.

## 3. Host Country Table

Displays World Cup host nations alongside the winner, runners-up, third-place team, and fourth-place team.

**Key Insight:** Hosting the World Cup does not automatically result in strong tournament performance, although some host countries have gone on to win the competition.

**Business Meaning:** Home advantage may provide benefits such as crowd support and familiarity with local conditions, but tournament success still depends strongly on team quality and performance.

## 4. Countries That Participated in the World Cup

Displays the different national teams that have appeared in World Cup history.

**Key Insight:** The dataset contains **81 unique participating countries**.

**Business Meaning:** The World Cup has become increasingly global, giving countries from different continents opportunities to compete at the highest international level.

## 5. Countries That Have Hosted the World Cup

Compare the number of times different countries have hosted the competition.

**Key Insight:** A relatively small number of countries have hosted multiple World Cups.

**Business Meaning:** Hosting the World Cup requires significant infrastructure, financial investment, stadium capacity, transportation systems, and organizational capability.

### 6. Countries per World Cup

Shows how many teams participated in each tournament.

**Key Insight:** The number of qualified teams increased considerably across World Cup history.

**Business Meaning:** FIFA's expansion of the competition has increased global participation and provided more countries with opportunities to compete internationally.

# PAGE 2: HOST NATION ANALYSIS

### 1. Host Nation Performance Through the Years

Tracks how host nations performed across different World Cup tournaments.

A performance score was created to allow host results to be represented numerically:

- 5 = Winner
- 4 = Runner-up
- 3 = Third place
- 2 = Fourth place
- 1 = Did not finish in the top four

**Key Insight:** Host nation performance varies considerably across tournaments. Some hosts won the tournament, while many failed to reach the top four.

**Business Meaning:** Hosting provides potential advantages, but home advantage alone is not enough to guarantee tournament success.

### 2. How Often Has the Host Nation Won?

Compares World Cups where the host nation became champion with tournaments where the host did not win.

**Key Insight:** Host nations won 6 out of 22 World Cups.

**Business Meaning:** Winning the World Cup as host is relatively uncommon, meaning that hosting does not guarantee a major competitive advantage.

## 3. Host Win Rate

Measures the percentage of tournaments won by the host nation.

**Key Insight:** The host nation win rate is 27.27%.

**Business Meaning:** Less than one third of World Cups in the dataset were won by the host country. This suggests that home advantage may help but cannot replace team quality, preparation, and competitive strength.

## 4. How Far Have Host Nations Progressed?

Compares the final tournament positions achieved by host nations.

**Key Insight:** Most World Cup hosts did not finish among the top four teams.

**Business Meaning:** Hosting a major tournament does not necessarily translate into elite competitive performance.

## 5. Qatar 2022 vs Average World Cup Host Performance

Compares Qatar's host performance with the historical average performance of World Cup hosts.

**Key Insight:** Qatar recorded a host performance score of 1, which was below the historical average.

**Business Meaning:** Qatar's 2022 performance differed from many previous host nations, particularly those that progressed deep into the competition.

## 6. Qatar Compared with Recent World Cup Hosts

Compares Qatar's performance with more recent host nations.

**Key Insight:** Qatar was among the weaker-performing recent hosts based on the performance scoring system.

**Business Meaning:** The analysis shows that recent host nations have experienced very different outcomes, further demonstrating that hosting alone does not determine tournament performance.

# PAGE 3: FRANCE'S PATH TO GLORY – 2018

## 1. France's 2018 Match Table

Displays France's matches during the 2018 World Cup, including opponents, stages, and goals.

**Key Insight:** France remained unbeaten throughout the tournament and successfully progressed from the group stage to the final.

**Business Meaning:** France demonstrated consistency across both group-stage and knockout matches, which is essential for winning a major tournament.

## 2. France's Goals to World Cup Glory

Shows the number of goals scored by France against each opponent during the tournament.

**Key Insight:** France scored particularly strongly during the knockout stage, including 4 goals against Argentina and 4 goals against Croatia in the final.

**Business Meaning:** France was able to increase its attacking effectiveness in high-pressure knockout matches.

## 3. Goals Scored by World Cup Champions per Tournament

Compares the total goals scored by each World Cup-winning country during its championship tournament.

A DAX measure was created to identify the tournament winner for each year and calculate only the goals scored by that winning team.

**Key Insight:** France scored 14 goals during its 2018 championship campaign.

**Business Meaning:** France's attacking output was strong but not the highest among all historical champions. This suggests that winning the World Cup requires more than simply scoring the most goals.

## 4. Goals Conceded by World Cup Champions per Tournament

Compares how many goals different World Cup champions conceded during their title-winning campaigns.

A DAX measure was created to calculate the goals conceded by the tournament winner in each World Cup year.

**Key Insight:** France conceded 6 goals during the 2018 tournament.

**Business Meaning:** France combined strong attacking performance with sufficient defensive stability to win the tournament.

## 5. France 2018 Match Results

France's match outcomes were classified using a calculated column as either a Win, Draw, or Loss.

**Key Insight:** France recorded 6 wins and 1 draw, remaining unbeaten throughout the competition.

**Business Meaning:** France's championship was based on consistency and the ability to avoid defeat throughout the entire tournament.

## Important Analytical Decision

The original plan was to analyze Argentina's 2022 World Cup winning campaign.

However, the available `2022_world_cup_matches` table did not contain Home Goals and Away Goals fields. Because detailed goal analysis could not be completed reliably, the analysis was changed to France's 2018 World Cup campaign, where complete match and goal data was available.

This decision ensured that the dashboard remained based on available and reliable data rather than assumptions.

# PAGE 4: QATAR 2022 TOP FOUR ANALYSIS

## 1. Pre-Tournament FIFA Ranking of the Top Four

Compare the FIFA rankings of Argentina, France, Croatia, and Morocco before the Qatar 2022 World Cup.

**Key Insight:**

- Argentina-3rd
- France -4th
- Croatia -12th
- Morocco-22nd

**Business Meaning:** The final four contained both highly ranked favorites and teams that significantly exceeded pre-tournament expectations.

## 2. FIFA Ranking vs Final World Cup Position

Compares each team's FIFA ranking with its final tournament position.

**Key Insight:**

- Argentina moved from **3rd to 1st**
- France moved from **4th to 2nd**
- Croatia moved from **12th to 3rd**
- Morocco moved from **22nd to 4th**

**Business Meaning:** FIFA rankings provide a useful measure of expected strength, but tournament results can differ significantly from pre-tournament expectations.

## 3. Knockout Stage Progression of the 2022 Top Four

Shows how far each of the four teams progressed during the knockout phase.

A simple progression scoring system was created to represent the stages numerically.

**Key Insight:** Argentina and France reached the final, while Croatia and Morocco reached the third-place match.

**Business Meaning:** All four teams demonstrated strong knockout stage performance, but Argentina and France progressed furthest.

## 4. World Cup Titles Before Qatar 2022

Compares the historical World Cup titles won by the four teams before the 2022 tournament.

**Key Insight:** Argentina and France had each previously won 2 World Cups, while Croatia and Morocco had never won the competition before Qatar 2022.

**Business Meaning:** Argentina and France entered the tournament with greater historical championship experience, while Croatia and Morocco demonstrated that recent performance can challenge traditional football dominance.

## 5. Team Ranking and Final Position

Provides a table summarizing FIFA ranking, final tournament position, and Top Four classification.

**Key Insight:** Morocco produced the largest difference between ranking and tournament finish.

**Business Meaning:** Morocco was the major standout among the final four because it reached fourth place despite entering the tournament ranked **22nd**.

### Important Analytical Decision

The original plan for this page was to classify countries as overachievers and underperformers using FIFA rankings and tournament performance.

However, difficulties occurred when trying to calculate the exact furthest stage reached for all 32 teams because of inconsistencies between team names and stage information across the 2022 tables.

The analysis was therefore redesigned to focus specifically on the four best-performing teams.

This provided a cleaner and more reliable comparison using available FIFA ranking and final-position information.

# PAGE 5: NIGERIA AT THE WORLD CUP

## 1. Nigeria's World Cup Progression Over Time

Shows how far Nigeria progressed in each World Cup appearance.

A simple performance score was created:

- **1 = Group Stage**
- **2 = Round of 16**

**Key Insight:** Nigeria reached the Round of 16 in 1994, 1998, and 2014, while exiting at the group stage in 2002, 2010, and 2018.

**Business Meaning:** Nigeria has shown the ability to progress beyond the group stage but has not yet advanced beyond the Round of 16.

## 2. Nigeria's World Cup Match Results

Shows the distribution of Nigeria's wins, draws, and losses across all World Cup appearances.

A calculated column was created to compare Nigeria's goals with its opponents' goals and classify each match as a Win, Draw, or Loss.

**Key Insight:** Across 21 matche**s**, Nigeria recorded:

- **6 wins**
- **3 draws**
- **12 losses**

**Business Meaning:** Nigeria has achieved several important World Cup victories, but the relatively high number of losses has limited deeper tournament progression.

## 3. Nigeria's Goals Scored vs Goals Conceded by World Cup

Compares Nigeria's attacking and defensive performance across each tournament.

Two DAX measures were created:

- Nigeria Goals Scored
- Nigeria Goals Conceded

These measures automatically identify whether Nigeria was the home or away team and calculate the appropriate goals.

**Key Insight:** Nigeria's strongest goal performance occurred in 1994, when the team scored 7 goals and conceded 4.

**Business Meaning:** Nigeria's first World Cup appearance remains one of its strongest overall tournament performances.

## 4. Nigeria's World Cup Win Rate by Tournament

Shows the percentage of matches Nigeria won in each World Cup.

A DAX measure was created by dividing Nigeria's number of wins by the total matches played in each tournament.

**Key Insight:**

- 1994 — **50%**
- 1998 — **50%**
- 2002 — **0%**
- 2010 — **0%**
- 2014 — **25%**
- 2018 — **33%**

**Business Meaning:** Nigeria achieved its strongest tournament win rates in 1994 and 1998, highlighting the strength of its earlier World Cup teams.

### 5. Interactive Chart Relationships

The dashboard allows users to click individual World Cup years to filter related visuals.

For example, clicking the **1998 win-rate bar** filters the Nigeria match-results donut chart from all **21 matches** to only Nigeria's matches from the 1998 tournament.

**Key Insight:** Nigeria played four matches in 1998, winning two and losing two.

**Business Meaning:** Interactive filtering allows users to investigate specific tournament performances rather than only viewing overall historical totals.

## Slicer Functions

### 1. Year Filter

Allows users to select individual World Cup years and analyze tournament-specific information.

### 2. Host Country Filter

Allows users to explore World Cups hosted by specific countries.

### 3. Interactive Visual Filtering

Charts can also act as filters. Selecting bars, columns, or categories updates related visuals on the same dashboard page.

These interactive functions allow users to move from general World Cup history to specific tournaments, countries, and performances.

## DAX and Data Modeling Approach

Several DAX measures and calculated columns were created to support the dashboard analysis.

### DAX Measures

Measures were used to calculate values such as:

- Total World Cups
- Total Matches

- Total Goals
- Total Host Nations
- Average Goals per Tournament
- Host Wins
- Host Win Rate
- France Goals Scored
- France Goals Conceded
- France Goal Difference
- Champion Goals Scored
- Champion Goals Conceded
- Previous World Cup Titles
- Nigeria Goals Scored
- Nigeria Goals Conceded
- Nigeria Win Rate
- Nigeria Total Matches

### Calculated Columns

Calculated columns were created when individual rows needed to be classified.

Examples include:

- Host Won
- Host Performance Score
- France 2018 Match
- France Goals
- France Opponent
- France Match Result
- France Match Order
- Top 4 Team
- Final Position
- Stage Score
- Knockout Stage Score
- Nigeria Match Result

These calculations helped convert the raw World Cup data into information that could be used effectively in charts and KPIs.

# Recommendations

1. Future World Cup analysis should include complete match-level data for all tournaments, including goals, possession, shots, expected goals, cards, and player statistics.

2. FIFA rankings should be combined with tournament results to identify teams that significantly outperform or underperform expectations.
3. Host-country analysis should consider additional factors such as home crowd support, travel requirements, climate, historical team strength, and qualification preparation.
4. Goal totals should not be used alone when comparing champions because historical World Cups had different tournament formats and numbers of matches. Goals per match could provide a fairer comparison.
5. Nigeria should focus on improving consistency during the group stage, particularly against stronger opposition, to increase the probability of reaching the knockout stages.
6. Nigeria's performances in 1994 and 1998 can be studied further to understand the qualities that contributed to its strongest World Cup win rates.
7. Future Nigeria analysis should include player-level statistics, squad age, player clubs, tactical formations, possession, shots, defensive statistics, and qualification performance.
8. Interactive filtering should continue to be used because it allows dashboard users to explore specific teams, tournaments, and years without creating additional report pages.
9. Future versions of the dashboard could include more recent World Cup data and prepare the structure for comparison with the 2026 FIFA World Cup.
10. A dedicated data-cleaning stage should be used to standardize team names across datasets to avoid mismatches when combining different World Cup tables.

---

# Conclusion

The FIFA World Cup Analysis Dashboard provides a detailed view of tournament history, host-country performance, championship success, team rankings, and Nigeria's World Cup journey.

The overall analysis shows that the World Cup has expanded significantly over time, with more participating teams, matches, and goals. Brazil remains the most successful nation with five titles, while only 6 of the 22 host nations became World Cup champions, producing a host win rate of 27.27%.

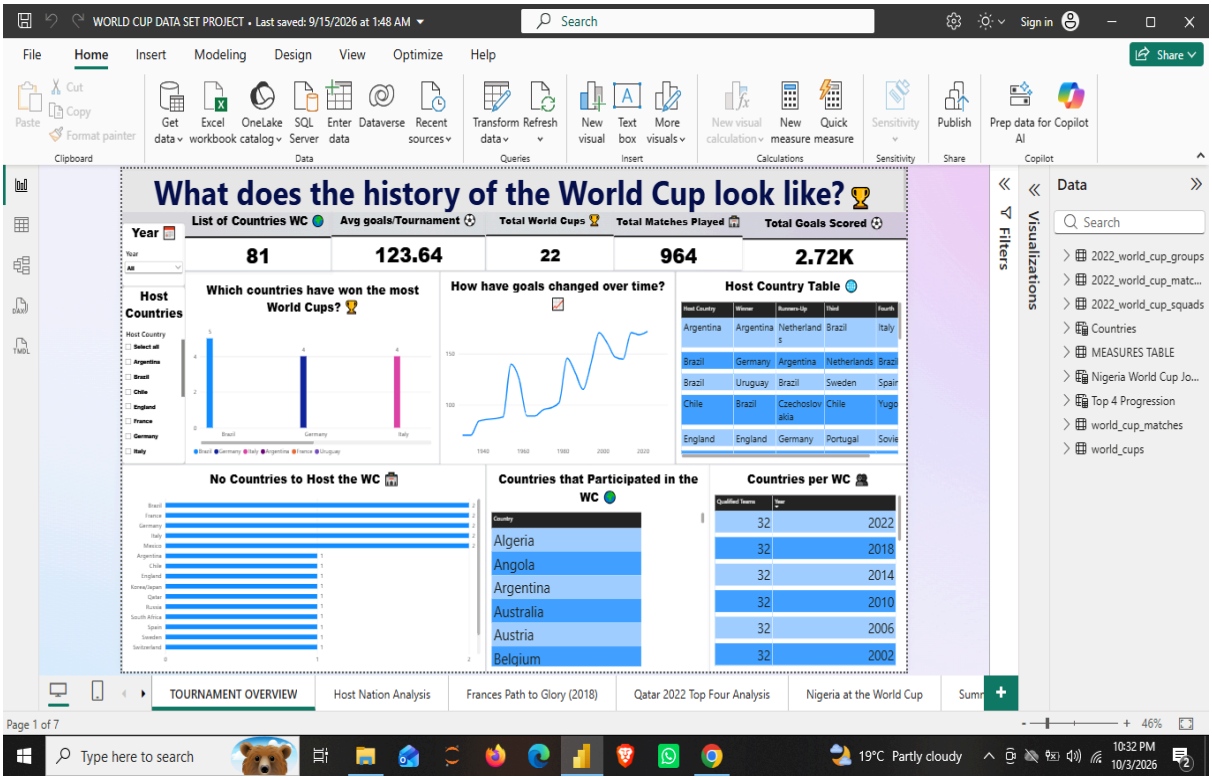

France's 2018 campaign demonstrated the importance of consistency, scoring ability, and defensive strength. France scored 14 goals, conceded 6, recorded 6 wins, and finished with a +8 goal difference while remaining unbeaten throughout the tournament.

The Qatar 2022 Top Four analysis showed that FIFA ranking does not always determine tournament success. Argentina and France entered the competition as highly ranked teams, while Croatia and especially Morocco significantly exceeded expectations. Morocco's rise from a pre-tournament ranking of 22nd to a fourth-place finish was one of the most notable performances identified in the analysis.

Nigeria has participated in 6 World Cups, played 21 matches, and reached the Round of 16 three times. Its strongest win rates occurred in 1994 and 1998, while 1994 also produced one of Nigeria's strongest overall attacking performances.

Overall, the dashboard demonstrates that World Cup success depends on a combination of historical strength, tournament consistency, attacking performance, defensive performance, and the ability to perform under knockout-stage pressure. It also shows how Power BI, DAX measures, calculated columns, interactive filtering, and data visualization can be used to transform historical football data into clear and meaningful insights.
